

AFTERMARKET

Air Bag Rebuild Program

An air bag rebuild should be completed every six months to a year, depending on usage and wear in production.

How does the program work?

1. Determine the type of air bags and email us for a quote.
2. Send us your purchase order for repair.
3. We send you an Air Bag Return (ABR) number with return shipping instructions.
4. We inspect and repair your air bags.
5. We ship your air bags back to you 10 days after we receive them.

Shipping costs are customer responsibility. See reverse side for instructions to determine air bag type.
